As a leading supplier of workshop equipment and storage systems, Lista turns a space into a functional working area, as promised by the brand motto '**Making Workspace Work**'.

Lista products are known for their very high quality, durability, longevity and efficiency. As a result of their systemized modularity and flexibility, they lend themselves ideally to extension and adaptation if new requirements have to be met.

Lista's advisory and service expertise guarantees that working and storage areas fulfil their purpose – no matter how complex a task may be.

Represented by:

LISTA_Solutions for Health Care

How are you?

It is said that a person's most valuable asset is his health. Lista supports service providers in the Health Care sector in maintaining this asset in the best possible way. With functional and effective workspace and storage facilities – as good as can be.

No other area combines so many different activities which, despite their variety, are dedicated to a common goal, in the way the Health Care sector does. Focused on the improvement and preservation of health and well-being, hospitals and nursing facilities, doctors' practices and therapy stations, together with the pharmaceutical industry and medical technology, all fulfil their various tasks.

Lista supports this work with the appropriate storage solutions. Designed to suit work sequences and operational processes, these bring additional efficiency and reliability into everyday life. They create overview and order, simplify archiving and storage, and ensure more safety in the handling of valuable and important documents, instruments and substances. System solutions from Lista are also space-saving, and make optimal use of the available room. They are flexible, modular, safe and individual.

Systematic thinking instead of standardisation pressure

Our comprehensive range of products fulfils almost every customer need: From the mobile drawer cabinets colour-coordinated to other furnishings to the combination cabinet system.

Flexible partitioning combined with easy and clear labelling: Synthes relies on Lista quality for the optimum storage of its orthopaedic instruments and implants throughout Europe.

If everything was the same, everything could be the same. Side effects would be eliminated, and the success of the therapy would be guaranteed. However, as long as variety dominates – and this will also continue to be the case in the future – flexibility will remain the order of the day.

Applied to Lista equipment storage systems, flexibility means the possibility of a simple adaptation to an environment, a task, a storage item. Lista fulfils this requirement with its broad and systematically developed range of products. A Lista device can be adapted, modified and expanded at any time, now and in the future.

What appears to be the same from the outside can be very different on the inside. Whether for medicines or implants, gauze bandages or Thera-Bands, the partitioning material adapts to them all. Each drawer can therefore be organised appropriately.

It is said that colour has a direct effect on one's physical or psychological condition. It can promote well-being, work efficiency or even empathy. This realisation is being increasingly taken into account in the design and equipment of interiors. The extensive colour range of Lista products has solutions ready for every taste, every need and every situation.

Lista flexibility allows for rational organisational principles based on daily working processes, so that the right object is found intuitively.

For all circumstances

Whether a hospital receives a new wing, or the start-up of a medicinal technique achieves a break-through, or a pharmacy expands into an adjacent shop area – whenever the needs for space change, it can soon be seen whether or not the fittings can keep pace with the new requirements.

Lista has developed its workplace and storage equipment systems in a modular manner. As a result, suitable solutions can be found for both the smallest rooms and the largest spaces. And if

the spatial conditions change over the course of time, Lista applications can be expanded and adapted at any moment.

Thanks to this high level of modularity, solutions using standard products are even possible in unusual spatial configurations. And, over the long term, this results in a high level of design freedom in the planning of new or existing working areas – an added value that pays off, particularly in the case of a tight budget.

Space is expensive and general conditions and needs vary. Space-saving solutions are always in demand, whether for the logical storage of documents and instruments or quite simply for practical staff lockers for their personal belongings.

Documents can be heavy and not only in terms of their content. And that's why the stability and load-bearing capacity of shelving systems is often a very important factor.

Who may, can

Important things have to be protected. Depending on the need. Simply with keys, or with software controlled access systems. Lista solutions ensure good protection and fast access in equal measure.

Trust is good, but control is better. And this is sometimes even a matter of life and death, such as in the case of medicines or hazardous substances. In most cases, however, a controlled system of access rights protects particularly valuable or confidential items from abuse.

In this connection, locking systems for cabinets and shelving systems play an important role. Lista has developed various solutions for this, ranging from a simple key to interconnected, software-controlled, electronic access systems, depending on the need and the desired security standard.

The increasing proliferation of regulations on the part of state and private interest groups has resulted in an increasing need for documentation. Lista offers assistance here, with solutions that make it possible to document individual accesses to secured cabinets.

Security also means safety, in particular with mobile solutions. Because items that have to reach their destination undamaged need to be particularly well stored. With the highly stable equipment, various security precautions and appropriate locking mechanisms, Lista has developed tried and tested solutions in this area.

Really economical

Health and well-being are always of great value to us, and yet the corresponding service providers are frequently subject to high cost pressure. Through its high level of system security, Lista offers an excellent investment protection here. The modularity of the products allows them to be adapted to new conditions at any time, and this has an overall positive effect on their cost-effectiveness.

To ensure that a project goes in the right direction from the very start, Lista has a tradition of working closely together with its customers. This procedure has proven to be particularly valuable and effective, and helps to save time, energy, and, last but not least, money.

Guaranteed certified

Lista is certified according to ISO 9001 and 14001. Its constant and high quality is thereby attested.

Lista carries out a comprehensive ESD workplace programme. This is tested and certified according to IEC standard 61340-5-1 (TR2).

Local customer care

Lista products are of first-class quality, and are supplied with a 5-year guarantee. In addition to this, Lista offers exemplary services: from project management to expert local installation work and repair service.

To uphold local customer service, Lista maintains an international sales network. Manufacturing takes place in Switzerland and Germany. In the USA, furthermore, there is an independent affiliated company with its own production plants.

Progress as a duty

Nothing is so good that it cannot be made even better. Lista therefore carries out research and development in its sector. It is here that the course is set for innovative and intelligent solutions that are both practical and future-oriented.

Health Care means service for people.
For us too.
