As a leading supplier of workshop equipment and storage systems, Lista turns a space into a functional working area, as promised by the brand motto **'Making Workspace Work'**.

Lista products are known for their very high quality, durability, longevity and efficiency. As a result of their systemized modularity and flexibility, they lend themselves ideally to extension and adaptation if new requirements have to be met.

Lista's advisory and service expertise guarantees that workshop and storage areas fulfil their purpose – no matter how complex a task may be.

## LISTA\_Solutions for the Military

## Ready for action

**Supply is pivotal, availability a must, especially when military units are handling assignments. Lista supports stationary and mobile logistics formations with customized workspace and storage systems.**

From humanitarian aid to defence, from air space control to terrorism prevention: The challenges facing military units are varied, multi-layered and extremely complex. If they wish to master them successfully, functioning logistics, immediate availability and fully reliable partners are mandatory.

Supply reliability is essential for all missions carried out by land, sea or air. Whether stationary or mobile, long prepared or unexpected, Lista knows what's needed. After all, we have devoted ourselves to designing functional workspaces and storage areas for some 60 years, and we pay attention to a clear arrangement and order.

In cooperation with various military formations, hardwearing products and system solutions suitable for the rough realities of field use have emerged.

Available, ready, at hand.

## Keep the facts in mind

The deployment of tanks, anti-aircraft ordnance, transmitter trucks, transport lorries and other vehicles calls for carefully planned logistics. Fuels, lubricants, tools and spare parts must be ready and waiting in the right place at the right time.

Troops have to take along everything required on the spot and immediately to fulfil a mission: Mobile workshops, mobile spare parts stores and practically as well as functionally equipped shelters on trucks. More and more, ready equipped containers are being used as workshops and spare parts stores.

To make possible the relocation of even whole spare parts stores with a minimum of trouble for re-use where the action is taking place, Lista has developed stackable cabinets. They can be simply loaded onto a truck and transported to wherever needed to serve their purpose at the new location. Modularity, flexibility, good order and rapid access, everything is where it's required.

Lista equipment optimizes space utilization in containers taken along as workshops and spare parts stores to fulfil missions.

## Functionality in air space

Skilled manoeuvres by military airshow squadrons thrill millions of spectators worldwide. Every day, however, air forces go into serious action with aircraft on air lifts, surveillance flights, operational missions and rescue operations. Then too, when it's a matter of life or death, fully functional aircraft and helicopters play a decisive role.

Aircraft require a sophisticated infrastructure to be operational at the right time with the right configuration in the right place. Only properly equipped hangars and mobile shelters make possible a mission at short notice. Lista is the guarantee for the space-saving and clearly arranged storage of tools, spare parts, electric

components, electronic modules, testing kits and maintenance material. Our solutions ensure not only rapid access to what is required, but also simple access control.

Lista products facilitate storage and also work. No matter whether a firmly installed workbench, an ESD workstation or a mobile, electronically lockable tool cabinet is concerned, functional solutions simplify the important job of servicing and maintenance specialists.

Equipment must serve a cause. When customized for tasks and integrated into processes, equipment fully supports focussed work operations.

## To the horizon and back

From the defence of coastal strips to the shipment of troops and ordinance equipment to trouble spots, navy units are at the ready for a variety of missions. No matter whether a frigate, a submarine or an aircraft carrier, big things have to be accomplished in small spaces at sea.

This very special operating situation demands very special solutions. To ensure the smoothest possible flows of material and to provide flexible but still practically equipped workplaces, a structured approach is a must. There is no

standard formula, planning is of vital importance as is close cooperation with the ordering party.

At a base or on board, work is invariably tackled where it arises, regardless of how complicated present-day warships and other watercraft might be. Mobility is of major importance. In rough seas, furthermore, it is crucial that stored goods are secured in cabinets and on shelves. Lista has developed tailor-made solutions to cope with these conditions.

Maximum attention must be paid to securing and protecting materials being transported, no matter what external conditions might prevail.

## Wherever duty calls

Disaster relief, humanitarian aid, peacekeeping: On missions such as these, the world becomes the military's operational area. International cooperation with other armed forces and collaboration with civil organizations continually gain in importance.

For missions of this kind, the military provides not only manpower but also a large variety of equipment, vehicles, aircraft, helicopters or other means of transport and sets up as well as safeguards necessary infrastructures, from emergency

shelters to hospitals. Here too, mobility, logistics and supply reliability are key factors that make the action taken a success.

Lista products meet such requirements as modularity, system design and robustness. Many special features, moreover, have been developed to ensure that transported material is still fully functional at the destination. A clear layout and good order guarantee simple and rapid access to what is needed, while locking systems support the organization and control of access authorization.

Keeping good order becomes child's play when equipment details are optimized for the job at hand. For storing small parts in drawers or liquids in cabinets Lista has just the right solution.

## Down to the last detail

Mobility, modularity, security and individuality: These key features of Lista products result from many years of experience, sophisticated concepts and innovative ideas. Needless to say, Lista products have already proven their suitability for rough military use in the field.

Mobility, for example:

In order that work can be tackled where it arises, we make mobile what has to be mobile, like putting drawer cabinets and workbenches on wheels. Then again, dismantling, transporting and re-assembling entire stores is no problem thanks to our stackable cabinets.

Security, for example:

Mobile workshops and shelters undergo heavy vibration during transport. Goods thus have to be carefully stowed en route. In view of the high strength and stability, the various security measures and the special locking mechanisms of Lista equipment, we offer the ideal answer to this problem.

Modularity, for example:

One of the Lista products' major benefits comes from their modularity. Space is utilized with the greatest efficiency. If conditions and requirements happen to change, the product applications can be extended and adapted to suit the new situation at any time.

Individuality, for example:

What looks identical on the outside, can be very different inside. This applies equally to storage equipment as to workstations. The intended purpose determines what comes where and why. Every drawer is appropriately organized thanks to our wide variety of installation material. A coating suitable for every situation can be selected from our extensive range of colours.

**Lista products are available, as standard, in any one of eight colours. But, colour combinations can also be supplied. Individual colour schemes too, can be provided on request.**

## Customized and functional

## Focus on efficiency

The budgets of state institutions are under pressure. With Lista's high level of system reliability and security, we provide excellent security for capital expenditure. And our product modularity permits adaptations to suit new circumstances at any time. This influences the economics positively.

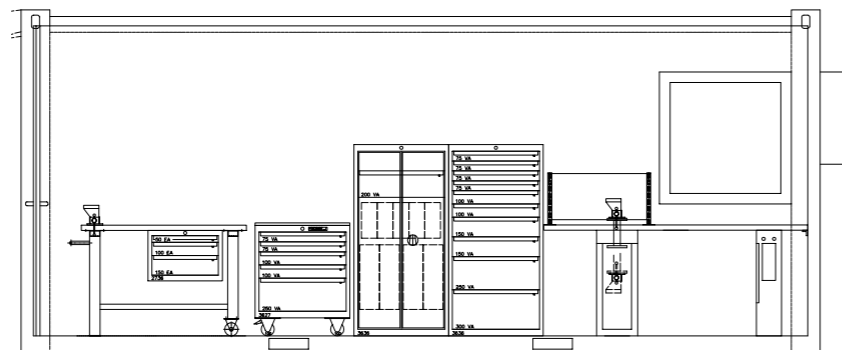

## Local customer care

In addition to first-class product quality with a 5-year guarantee and subsequent product availability guaranteed for 10 years, Lista offers exemplary services, from project management to expert local installation work and a repair service.

To uphold local customer service, Lista maintains an international sales network. Manufacturing takes place in Switzerland and Germany. In the USA, furthermore, there is an independent affiliated company with its own production plants.

Every task is unique. After all, customers' requirements are individual and their needs different. That's why great importance is attached to professional planning. Lista's specialists have already developed numerous solutions for diverse military and civil institutions.

When doing so, the customary close cooperation with ordering parties always proved to be especially valuable and effective. It guarantees, for example, that a project progresses in the right direction from the start and avoids wasted effort. This saves time, effort and money.

**No matter whether stationary or mobile: Lista creates practical, space-saving and secure workspace and storage systems for customers day by day based on the knowledge and experience of what must be possible and when.**

## Guaranteed certified

NATO confirms the suitability of Lista solutions for military requirements. Accordingly, Lista products have been NATO listed for years (NATO Supplier Code: S4437).

Lista is certified according to ISO 9001 and 14001. This attests that Lista products and services have a constant, high quality level.

Lista has a complete ESD workstation range. It has been tested and certified in accordance with the IEC standard 61340-5-1 (TR2).
