DRAWER STORAGE WALLS

A drawer storage wall system which unites all the benefits of drawer cabinets and shelving systems. Drawers, pull-out shelves and adjustable shelves can all be combined in drawer storage walls. They can accommodate different quantities, sizes, and kinds of parts. Modifications can easily be carried out by simply rearranging the individual units.

The versatility of the drawer storage walls permits fittings which are compatible with different systems of logistics. Whether used for storage on a numerical basis or with data processing systems, perfect organization is always possible with drawer storage walls.

Lista, making workspace work.

DRAWER STORAGE WALLS

Side frames

Strong vertical side frames provide extremely high drawer storage wall load bearing capacity. The side frames can be covered with a plain end panel at the end of a storage wall row.

Full extension storage drawers

Continuous travelling telescopic drawer. 8 precision steel ball bearings and two support rollers guarantee smooth running. Carrying capacity max. 200kg. The decision whether to use normal extension or full extension storage drawers depends on the nature and weight of the goods stored.

Vertical storage drawers, part height

For careful, suspension storage of pre-set tools.

Vertical storage drawers, full height

For careful, suspension storage of pre-set tools. Vertical storage drawers can also be equipped with half-depth shelves, perforated panels and adjustable shelves.

Adjustable shelves

Plain or slotted design for division with plain partitions. Adjustable shelves are suspended in the side frames with bottom supports. Carrying capacity up to 200kg.

Pull-out shelves

For storing heavy individual parts and fixtures. The inserted slats allow goods to be stored flush with the handle and enable them to be withdrawn. Carrying capacity when fully withdrawn is max. 200kg.

Heavy-duty extensions

Used primarily in tool making for storing fixtures and tools. Heavy-duty extensions are easy to use, even under a heavy load. Available in sizes 36x36E and 54x36E. Carrying capacity up to 350kg.

Shelf side panels

Serve as end stop if space cannot be covered with intermediate fill-in strip.

Counter

Work surfaces in the form of service counters, inspection and checking stations can be designed if required.

Security

Roller shutters, sliding doors and hinged doors can be used for maximum security, depending on the application and requirements involved.
